

## External Seasonal Spraying

Thank you for choosing Certified Pest Control to help control insects around your home. Our technicians are always happy to answer any questions when they are at your home, however in case we miss you, this guide should help provide you with all the information you need.

### How to Prepare for your Treatment:

- Close all your windows and ensure pets are not left outside.
- Remove any pet food or water dishes, or children's toys from the area.
- Any items (i.e. BBQ, patio furniture, etc.) that may be against the home should be moved away or covered.

### The Day of Treatment:

- If you're booked for an external only treatment, you do not need to be home.
- The technician will sweep down any existing spider webs/debris before treatment (if applicable).
- All external walls of your home will be sprayed, around windows, eaves, doorways and other areas depending on the insects of concern and treatment type.
- We will also treat any external buildings that you have requested in advance.

### After Treatment:

- Residents and animals should stay away from exterior of the home for at least one hour following treatment, however you can remain inside during treatment with windows and doors closed.
- Most cases will see immediate improvement, but it can take up to **one week** to see the most benefit.
- You can clean the glass on your windows immediately, but avoid window frame and sills. Do not use powerwashers.

### What is the warranty?

- Each spray is covered by a 30 day warranty.

### How will weather effect my treatment?

- If it is too windy or wet on your scheduled treatment day, we will need to rebook and will contact you as soon as possible.
- Once the product is sprayed it takes about half an hour to dry. After that, the rain will not wash it away.
- What effects the chemical the most is high heat and direct sunlight, which is why most treatments don't last all season. Some areas of the home will break down faster than others. This is why it may be beneficial to look at additional treatments throughout the season.

### How can I make payment?

Your invoice will be e-mailed to you once service is complete. You can either mail a cheque, pay online via credit card, or send an etransfer.

## IMPORTANT NOTES

For severe problems, or for **full seasonal coverage**

we recommend signing up for our seasonal packages.

Please feel free to contact us for a quote.

If this is your first treatment with us, and there are additional buildings or areas that you want treated, please **let us know** in advance, as it may effect pricing.

If you are seeing insects

**inside**

your home, we recommend an internal spray. External sprays will only prevent new insects from entering.
